Root and Tuber Crops: 7 (Handbook of Plant Breeding)

Root and Tuber Crops: 7 (Handbook of Plant Breeding)

It is important to include Tuber and Root Crops in the Handbook of Plant Breeding.

They include starchy staple crops that are of increasing importance for global food security and relief of poverty, important millennium goals for the United Nations. Indeed, 2008 was the UN International Year of the Potato in recognition of this role of the potato as the world's third most important food crop after wheat and rice. The other major staples are cassava, sweetpotato and yam. Together they occupy about 50 million hectares, with production at 640 million metric tons, of which 70% is in developing countries. In total there are more than 30 species of Root and Tuber Crops grown in the world today. Given the content of other volumes in the series, it makes sense to include sugar and fodder beets; swedes and turnips; and minor root and tuber crops so that the book series is as complete as possible.

Like the other volumes in the series, this one will present information on the latest in applied plant breeding using the current advances in the field, from an efficient use of genetic resources to the impact of biotechnology in plant breeding. Seven crop specific chapters are proposed, together with an introduction to this diverse set of plant species. Outstanding scientists for each crop species are proposed as senior authors, who may invite co-authors to contribute part of a chapter. In order to increase the overall acceptance of the volume, balance will be sought with authors from different research groups/countries who will be asked to contribute and collaborate where appropriate. The book should be of interest to researchers in both academic and industrial settings, and in both developed and developing countries, as well as students and teachers of plant breeding. It is currently extremely important to educate and train a new generation of plant breeders given the challenges faced by humankind in producing more food for an expanding global population during a period of environmental (including climate) change.

From reader reviews:

Catherine Crider:

What do you about book? It is not important together with you? Or just adding material when you really need something to explain what the ones you have problem? How about your extra time? Or are you busy individual? If you don't have spare time to accomplish others business, it is give you a sense of feeling bored faster. And you have time? What did you do? Every person has many questions above. They have to answer that question since just their can do this. It said that about publication. Book is familiar on every person. Yes, it is appropriate. Because start from on jardín de infancia until university need this specific Root and Tuber Crops: 7 (Handbook of Plant Breeding) to read.

Flora Godfrey:

Information is provisions for anyone to get better life, information currently can get by anyone in everywhere. The information can be a information or any news even restricted. What people must be consider when those information which is in the former life are challenging to be find than now could be taking seriously which one is appropriate to believe or which one typically the resource are convinced. If you get the unstable resource then you have it as your main information you will have huge disadvantage for you. All of those possibilities will not happen within you if you take Root and Tuber Crops: 7 (Handbook of Plant Breeding) as your daily resource information.

Guadalupe Ramsey:

Hey guys, do you would like to finds a new book to learn? May be the book with the concept Root and Tuber Crops: 7 (Handbook of Plant Breeding) suitable to you? The book was written by well known writer in this era. Often the book untitled Root and Tuber Crops: 7 (Handbook of Plant Breeding)is one of several books which everyone read now. That book was inspired a lot of people in the world. When you read this guide you will enter the new dimensions that you ever know previous to. The author explained their plan in the simple way, so all of people can easily to be aware of the core of this publication. This book will give you a lot of information about this world now. To help you see the represented of the world within this book.

Cecil Hardin:

A lot of e-book has printed but it differs. You can get it by world wide web on social media. You can choose the best book for you, science, comedy, novel, or whatever by searching from it. It is called of book Root and Tuber Crops: 7 (Handbook of Plant Breeding). You can contribute your knowledge by it. Without causing the printed book, it may add your knowledge and make anyone happier to read. It is most essential that, you must aware about book. It can bring you from one destination to other place.
