**Avian Biology: 008** Donald S. Farner, James R. King

Avian Biology, Volume VIII assesses selected aspects of avian biology. It is generally the conceptual descendant of Marshall's earlier treatise, "Biology and Comparative Physiology of Birds," but is more than simply a revision of it.

This volume consists of two relatively lengthy, diverse chapters that focus on adaptive significance of coloniality in birds and fossil records of birds. In particular, this volume looks into group phenomena related to central place systems, that is, systems in which one or more individuals move to and from a centrally located place in the course of daily activities. It also addresses selective factors that have been suggested to explain why individuals should form colonies rather than disperse within the available foraging space. This book will be useful as a reference material for advanced students and instructors in this field of interest.
