Homotopy Theory of Higher Categories: From Segal Categories to n-Categories and Beyond (New Mathematical Monographs) Carlos Simpson

The study of higher categories is attracting growing interest for its many applications in topology, algebraic geometry, mathematical physics and category theory. In this highly readable book, Carlos Simpson develops a full set of homotopical algebra techniques and proposes a working theory of higher categories. Starting with a cohesive overview of the many different approaches currently used by researchers, the author proceeds with a detailed exposition of one of the most widely used techniques: the construction of a Cartesian Quillen model structure for higher categories. The fully iterative construction applies to enrichment over any Cartesian model category, and yields model categories for weakly associative n-categories and Segal n-categories. A corollary is the construction of higher functor categories which fit together to form the $(n+1)$ -category of n-categories. The approach uses Tamsamani's definition based on Segal's ideas, iterated as in Pelissier's thesis using modern techniques due to Barwick, Bergner, Lurie and others.

From reader reviews:

Karon Hall:

Have you spare time for a day? What do you do when you have much more or little spare time? Yeah, you can choose the suitable activity with regard to spend your time. Any person spent all their spare time to take a move, shopping, or went to often the Mall. How about open or maybe read a book called Homotopy Theory of Higher Categories: From Segal Categories to n-Categories and Beyond (New Mathematical Monographs)? Maybe it is to get best activity for you. You recognize beside you can spend your time with your favorite's book, you can wiser than before. Do you agree with it has the opinion or you have other opinion?

Christina Bain:

You could spend your free time to read this book this reserve. This Homotopy Theory of Higher Categories: From Segal Categories to n-Categories and Beyond (New Mathematical Monographs) is simple to bring you can read it in the playground, in the beach, train and also soon. If you did not have much space to bring the particular printed book, you can buy typically the e-book. It is make you simpler to read it. You can save the particular book in your smart phone. Therefore there are a lot of benefits that you will get when one buys this book.

Annette Carroll:

On this era which is the greater individual or who has ability in doing something more are more special than other. Do you want to become one among it? It is just simple strategy to have that. What you must do is just spending your time not much but quite enough to possess a look at some books. One of several books in the top list in your reading list is usually Homotopy Theory of Higher Categories: From Segal Categories to n-Categories and Beyond (New Mathematical Monographs). This book which is qualified as The Hungry Inclines can get you closer in becoming precious person. By looking right up and review this e-book you can get many advantages.

Kristen Zamora:

Do you like reading a reserve? Confuse to looking for your favorite book? Or your book ended up being rare? Why so many question for the book? But any kind of people feel that they enjoy with regard to reading. Some people likes examining, not only science book but in addition novel and Homotopy Theory of Higher Categories: From Segal Categories to n-Categories and Beyond (New Mathematical Monographs) or others sources were given knowledge for you. After you know how the truly great a book, you feel need to read more and more. Science guide was created for teacher or maybe students especially. Those guides are helping them to add their knowledge. In additional case, beside science guide, any other book likes Homotopy Theory of Higher Categories: From Segal Categories to n-Categories and Beyond (New Mathematical Monographs) to make your spare time a lot more colorful. Many types of book like here.
